

## ABSTRACT AND BIOGRAPHY

### **Establishing a Performance Measurement Baseline (PMB)**

In order to adequately determine cost/schedule status on a project, a well-conceived Performance Measurement Baseline (PMB) must be developed. Organizing, scheduling and applying the proper resources to the work are essential to building and subsequently maintaining a PMB. The purpose of this presentation is to share with the participant how to properly establish a PMB for a project. This establishment must be accomplished in a timely/cost effective manner. Characteristics of cost effective PMB implementation will be addressed. In addition, good baseline change control is touched upon to enforce the importance of a quality PMB throughout the life of the project.

**Gary C. Humphreys**  
***President, CEO***  
**Humphreys & Associates, Inc.**

Gary Humphreys has been a consultant to industry for more than 30 years, providing technical support and training in project management to over 500 national and international clients. Mr. Humphreys has served as Chairman of the NDIA Program Management Systems Subcommittee, President and Chairman of the Board of the PMI College of Performance Management (CPM), and Leader of the Total Quality Management Process Action Team for streamlining EVMS-compliant system descriptions. As a contributing member of the Integrated Program Management Initiative Joint Team, he received the DoD's highest acquisition award, the 1998 David Packard Excellence in Acquisition Award. Mr. Humphreys has been a keynote speaker on performance measurement related subjects at SCEA Annual Conferences, the Defense Systems Management College, Air Force Institute of Technology, American Association of Cost Engineers, Project Management Institute, and numerous CPM National and International Chapter meetings.
